

Sigma7 Digital Training and Exercising Catalog

ACCELERATED RESILIENCE CAPACITY BUILDING PROGRAM

Sigma7 is a world leader in blended learning solutions, spanning videos, eLearning, videogames, digital exercise simulations and instructor led programs. We provide hundreds of Common-Off-The-Shelf (COTS) modules and courses, can modify our content to match your unique needs, or can design-build bespoke training solutions on demand. Our team of in-house researchers, technical content developers, training designers, scripting and editing experts, and animation, game, graphics and video production specialists can craft a course from start to finish. This allows

us to deliver efficiencies in the production process based on our experience, streamlined processes, and integrated resources - reducing time, effort and cost. Sigma7 also is recognized by multiple awarding bodies - enhancing our training solutions, while also providing you credible and defendable knowledge and skill resources.

We can provide our content in any format for self-hosting, or we can provide the mechanism for hosting and delivery.

BUSINESS CONTINUITY

The Business Continuity (BC) series is designed for senior executive and specific risk portfolio owners requiring upskilling within the areas of organizational resilience, business continuity management, and emergency and crisis management. The program seeks to cover a sufficient depth of content to enhance knowledge and application of these operational to strategic resilience themes to enable leaders and managers to become confident and effective in protecting people, operations, assets, facilities, information, business, and organizational reputation. This program addresses multiple learner groups and provides a long-term (as well as just-in-time) learning journey.

CRISIS MANAGEMENT LEADERSHIP PROGRAM

The Crisis Management Leadership Program (CMLP) addresses strategic resilience, business continuity, and crisis management topics for busy senior leaders and executives through a series of micro-learning opportunities. The first two modules address cross-cutting themes applicable to all risk portfolio owners and Crisis Management Team members. The remaining modules focus on specific areas of high-consequence risk and business disruption. The goal is to address strategic considerations to assist with more effective decision-making on fast-burn and high-impact crises; either through a structured learning journey, or to meet just-in-time needs.

SECURITY AND EMERGENCY MANAGEMENT

The Security and Emergency Management (SM) program addresses tactical to operational security, safety, and emergency management topics to upskill security professionals, security focal points, and non-security management teams to address a wide range of security, safety, and emergency related topics. The program is designed to offer foundational through to proficient knowledge areas for both new and experienced professionals; addressing critical areas of risk to people, operations, facilities, assets, information and wider business interests. The program offers both a structured long-term learning pathway, as well as the ability to upskill to meet just-in-time training needs.

SECURITY AND EMERGENCY MANAGEMENT

The Investigations and Evidence Management (IEM) program is designed for both professional and qualified investigators to validate and enhance preexisting knowledge and skills and to ensure a consistent organizational approach to investigations - but as importantly - it is also designed to enable those leading or participating in an investigation (who have no prior training, qualifications, or experience) to actively manage or support an investigation. The objective of the course is to support effective and legally compliant processes to ensure a professional and legal investigation is conducted - and that any findings are admissible in a criminal prosecution or employment or contract termination procedure.

INDIVIDUAL STAFF SAFETY, SECURITY AND CULTURAL AWARENESS

The Individual Staff Safety, Security and Cultural Awareness program (S) is design for both international travelers as well as domestic (host nation) staff resident / working in their home countries. The program addresses a wide range of content in both condensed as well as deep dive modules spanning security and safety awareness, as well as cultural sensitivity themes. The program can provide individual components of learning, or it can be packaged as a series of courses. Content provides the opportunity for both structured learning pathways, as well as the ability to meet just-in-time training needs.

SAFE DRIVER TRAINING

The Safe Driver Training (SDT) program addresses the core areas of safe vehicle operations for international and domestic (host nation) drivers in order to reduce risky behaviors and road traffic accidents impacting people, property, and livestock. The program also includes a security module for areas where crime, banditry, and terrorism exists; as well as a motorcycle module for those operating two wheeled vehicles. The program also includes Fleet Management modules addressing fleet standards and operations, travel risk management, and driver evaluations and performance corrective actions.

REMOTE CASUALTY MANAGEMENT AND STRESS TRAUMA

The Remote Casualty Management and Stress Trauma (MD) program covers basic first aid within remote environments where medical equipment and resources may be delayed, absent, or weak. The program addresses all common areas of medical trauma, as well as Triage, environmental risks, and PTSD. The program is not designed to qualify participants, but rather to provide a tactical understanding of how to improvise and stabilize casualties until medical help arrives.

HEALTH, SAFETY AND ENVIRONMENT

The Health, Safety, and the Environment (HSE) program addresses a wide range of areas, meeting the needs of both general staff in terms of understanding how to identify and react to a fire in the workplace (or at home), as well as specialists involved in Hot Work, Risk Assessments, permitting, and standards and process management. The program can be used to focused on specific themes and learner groups, or can form an integrated program to address a larger portfolio of risk issues. The program includes videos, eLearning, videogames and emergency and crisis exercising tabletop simulation exercises.

TRAIN THE TRAINER

The Train the Trainer (TTT) program is designed to build training instruction and exercise facilitator competence and confidence within those with little to no instructional or facilitator ability, qualifications, or experience. The program is based on proven Methods of Instruction (Mol) techniques and enhances the ability for recipient learners to receive, understand, contextualize and apply knowledge and skills through engaging, relevant and interesting delivery techniques - regardless of the area of learning.

MINI BRIEF PROGRAM

The individual micro-learning Staff Security, Safety, and Cultural Awareness Building minibrief (MB) program (Aka Hostile Environment Awareness - HEAT) is design for both international travelers as well as domestic (host nation) staff resident / working in their home countries. The program is designed as a mutually supportive, multi-language, and organizationally consistent suite of modules which address a wide range of content through condensed modules spanning security and safety awareness, as well as cultural sensitivity themes. The program can provide individual components of learning, or it can be packaged as a series of courses. Content provides the opportunity for both structured learning pathways, as well as the ability to meet just-in-time training needs. The program is also directly aligned to complementary immersive videogame solutions to exercise and validate the application of knowledge.

CRISIS MANAGEMENT LEADERSHIP TEAM

The Crisis Management Leadership Team (CMLT) and Local Incident Management Team (LIMT) tabletop simulation exercising solution is designed to provide organizations a highly effective, easy to implement, and standards aligned solution for running focused and engaging leadership crisis and emergency simulation exercises. The program also includes Family Liaison Officer (FLO-EX) specific exercise simulations. The solution includes two tiers of exercising: [1] the crisis level for operational to strategic resilience and crisis response, and [2] the incident level for tactical to operational emergency response. The program addresses a wide range of likely incidents and incorporates an escalating scenario to test complex and fluid decision-making through incident data-points, leadership prompts, role player injects, news clips, tailorable social media and newspaper injects, and tutorials on how to plan and run an exercise, or how to be a role player. Each year organizations are offered the opportunity to request 2 free scenarios of their choice, and 1 free language. New modules are automatically added to the library at no cost to those using the system.

HOSTILE ENVIRONMENT AWARENESS TRAINING (HEAT)

The Hostile Environment Awareness Training (HEAT) videogame solution is designed to exercise and test through contextualized gaming critical safety and security awareness topics. This program not only exercises the application of knowledge and skills, it also reconfirms or corrects knowledge as part of the process, consolidating, correcting or reenforcing the learning process.

SECURITY MANAGEMENT

The Guard Force Management (GFM), Guard Force Emergency Management (GFEM), and Guard Force Individual (GFIn) skills program is designed to meet the needs of all levels of security risk management, guard force management, guard force supervision, and tactical guard force skills. The program is also complemented by a Guard Force Management Exercising (GFM-EX) component which provides tabletop simulation exercises against which managers can apply context driven knowledge and skills to enable better decision-making during an incident. The program can be adopted as a multi-learner program, offering a career development pathway as individuals grow personally and professionally; or it can be used to address specific bands or areas of technical knowledge.
